## VOIP Is Sweeping Through the Telecommunications Industry

*Jeffrey Weiss, President of High Tech Innovations Illustrates How Healthcare Providers Can Take Advantage of VoIP Networks*

New Jersey — December 2019 — Some technologies dramatically change the way we live and the way we conduct business. Voice over Internet Protocol (VoIP) is also having a similar impact in the healthcare world. VoIP technology is sweeping through the telecommunications industry at an astonishing rate and in order for healthcare practices to prepare for the future it's critical for them to take a hard look at this technology today.

Unlike regular phone service, VoIP conversations are transformed into digital information and sent over a broadband data network. For example, VoIP calls connect to a server where voice information is truncated into packets and sent across the Internet bypassing the long distance carrier altogether. This essentially means that VoIP callers do not use traditional phone lines and can avoid expensive long-distance charges.

In addition to substantial cost savings, VoIP networks

provide healthcare practices with extensive flexibility. Traditional phone service simply doesn't match the advanced features offered by VoIP. Unlike early versions of the technology, today's VoIP service offers much greater voice clarity and advanced features such as conferencing, dialing the phone from a desktop, and video chat. Furthermore, employees who use VoIP are more productive. They can place and answer calls from any location using VoIP. Features such as follow-me messaging enable employees to forward messages to several numbers, and it's easy to access e-mail and voicemail from their PCs.

The crucial decision in making the move to VoIP is selecting the right network provider. Small to mid-sized healthcare providers can tap into leading IT network providers such as High Tech Innovations to help them analyze their practice's needs and identify the right VOIP system to match those needs.

VoIP is here and healthcare practices are tackling this important decision today to ensure their communications tomorrow. This technology has the awesome capability of increasing profitability and giving practices a

competitive advantage in their marketplace. Soon, operating a healthcare practice without VoIP will be like trying to market without a website. The time is now and the future is VoIP.

### **About High Tech Innovations, LLC**

High Tech Innovations, LLC. has been providing cutting edge technology to hundreds of businesses and healthcare practices in the northeast region since 1997. The company has been working to increase the productivity and profitability of its clients by offering them a range of technical products and services in the field of communications (VoIP), managed IT services, structured cabling, networking, surveillance, network security, digital imaging and backup and disaster recovery. Their certified and experienced technicians and engineers provide technical support and maintenance to keep various businesses running smoothly and compliantly.
